010000, Astana, Kazakhstan

SUMMARY

Computer Science student graduating in 2026 with hands-on experience building distributed backend systems and production-ready real-time services in Go. Strong interest in infrastructure, reliability, databases, and large-scale platform engineering, with experience spanning design, implementation, testing, observability, and deployment.

EDUCATION

Bachelor of Science in Computer Science

August 2022 – April 2026

Nazarbayev University – Top 1 University in Central Asia

Astana, Kazakhstan

Coursework: Data Structures and Algorithms, Computer Organization, Operating Systems, Database Systems, Software Engineering, Software Architecture, Computer Networks, Artificial Intelligence, Linear Algebra, Discrete Mathematics

EXPERIENCE

Software Engineer

August 2025 – Present

Raycon – Messengers CRM System (WhatsApp, Instagram, Telegram)

Astana, Kazakhstan

- Built backend services for a multi-tenant messaging CRM integrating WhatsApp, Instagram, and Telegram, serving 3,000 tenants, 30,000 managers, and **3M users/day** with **sub-40ms** latency
- Owned ingestion, persistence, and tenant isolation for a real-time messaging pipeline handling **45M messages/day** and peaks of **20k messages/sec**
- Improved distributed processing reliability by implementing idempotency, retries, dead-letter handling, and sequencing controls, keeping error rate below **0.2%** under duplicate, out-of-order, and failure-prone delivery conditions
- Built a durable webhook ingestion layer in Go using SQLite WAL and NATS JetStream, preventing accepted webhook loss during downstream outages by safely persisting provider payloads before internal processing

Software Engineer Intern

June 2025 – August 2025

Beeline – Leading telecom operator serving 11.6M clients in Kazakhstan

Astana, Kazakhstan

- Reduced mean voice processing latency from **250ms** to **150ms** by implementing a Go microservice with concurrent STT/TTS session handling and request batching for real-time customer interactions
- Cut customer service response time from **3 minutes** to **15 seconds** by integrating AI bot services with billing systems via REST APIs for real-time balance and tariff inquiries
- Reduced incidents by **~20%** by expanding backend and frontend test coverage from **40%** to **88%**

Network Application Engineer Intern

January 2025 – June 2025

7Generation – An international specialist in telecom data analytics and monitoring software

Astana, Kazakhstan

- Increased real-time network flow processing throughput by **30%** by redesigning a concurrent Go pipeline to write directly to disk, reducing GC spikes under sustained load
- Improved anomaly detection accuracy by **25%** by implementing L7 protocol matching for HTTP/2 and DNS traffic

Software Engineer Intern

May 2024 – August 2024

Global Optima Technologies – Local IT outsourcing by ex-Meta, ex-Amazon engineers

Astana, Kazakhstan

- Cut PostgreSQL query time from **250ms** to **30ms** by adding targeted indexes and refactoring complex queries
- Reduced incidents by **~20%** by expanding backend and frontend test coverage from **40%** to **88%**

TECHNICAL SKILLS

Programming Languages: Go, Python, SQL, Rust

Core CS: Data Structures, Algorithms, OOP, Distributed Systems, Operating Systems, Database Systems

Backend & Distributed Systems: REST APIs, gRPC, WebSockets, Microservices, Event-Driven Architecture, RabbitMQ, Kafka, NATS JetStream, JWT

Databases & Storage: PostgreSQL, Redis, MongoDB, SQLite

Testing & Observability: Unit, Integration, E2E Testing, Testcontainers, Prometheus, Grafana, OpenTelemetry

Infrastructure & Tooling: Docker, Kubernetes, Linux, Git, GitHub Actions, GitLab CI, AWS S3
